**PURPOSE:** To provide a coating gun cleaning apparatus which is so composed as to efficiently wash out a coating adhering to the surface of a head of coating gun.

**CONSTITUTION:** In a coating gun cleaning apparatus 10, a cleaning chamber 11a is formed in the inside of a cylindrical casing 11 and three cleaning nozzles 12-14 and three air nozzles 15-17 are reciprocally installed in the inner wall of the cleaning chamber 11a. The cleaning nozzles 12-14 have jetting outlets 12a-14a to spray a cleaning liquid to a head 7a at the nozzle tip end inserted into the cleaning chamber 11a of the casing 11 and each jetting outlet 12a-14a is so installed slantingly as to make the cleaning liquid which is sprayed toward the periphery of the head 7a move spirally in the periphery of the head 7a. The air nozzle 15-17 are so installed slantingly as to make air which is jetted toward the periphery of the head 7a move spirally in the periphery of the head 7a.
